

# Secure AI Integration Enables Scalable Fraud Detection Launch

KEYSYS built a **cloud-to-cloud pipeline** that safely delivers **high-volume transaction data**—**accelerating onboarding** and enabling **enterprise-grade compliance**.

## Client

A **top fintech partner\*** helping **banks and credit unions** streamline **fraud prevention, onboarding, payments, and Banking-as-a-Service**.

## Business Problem

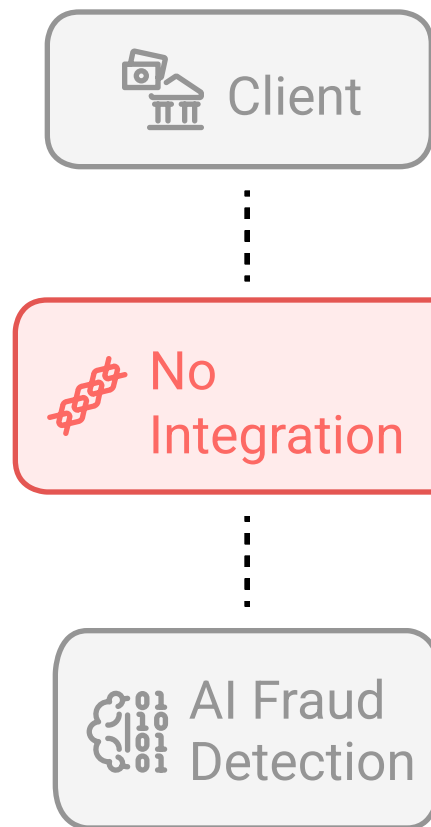

The client was preparing to launch an **AI-powered fraud detection service** in collaboration with a **third-party provider**. However, the integration required **precisely formatted and batched data**—adding **complexity, slowing deployment, and preventing financial institutions from participating**.

## KEYSYS Solution

KEYSYS built a **secure, cloud-to-cloud integration** between the client's platform and the third-party fraud detection service. The system automatically **batches, transforms, and delivers data via API**—meeting **strict security requirements** without retaining **sensitive information**.

## Impact

The client can now **onboard financial institutions** through a **reliable integration pipeline**—processing **tens of millions of transactions securely and at scale**.

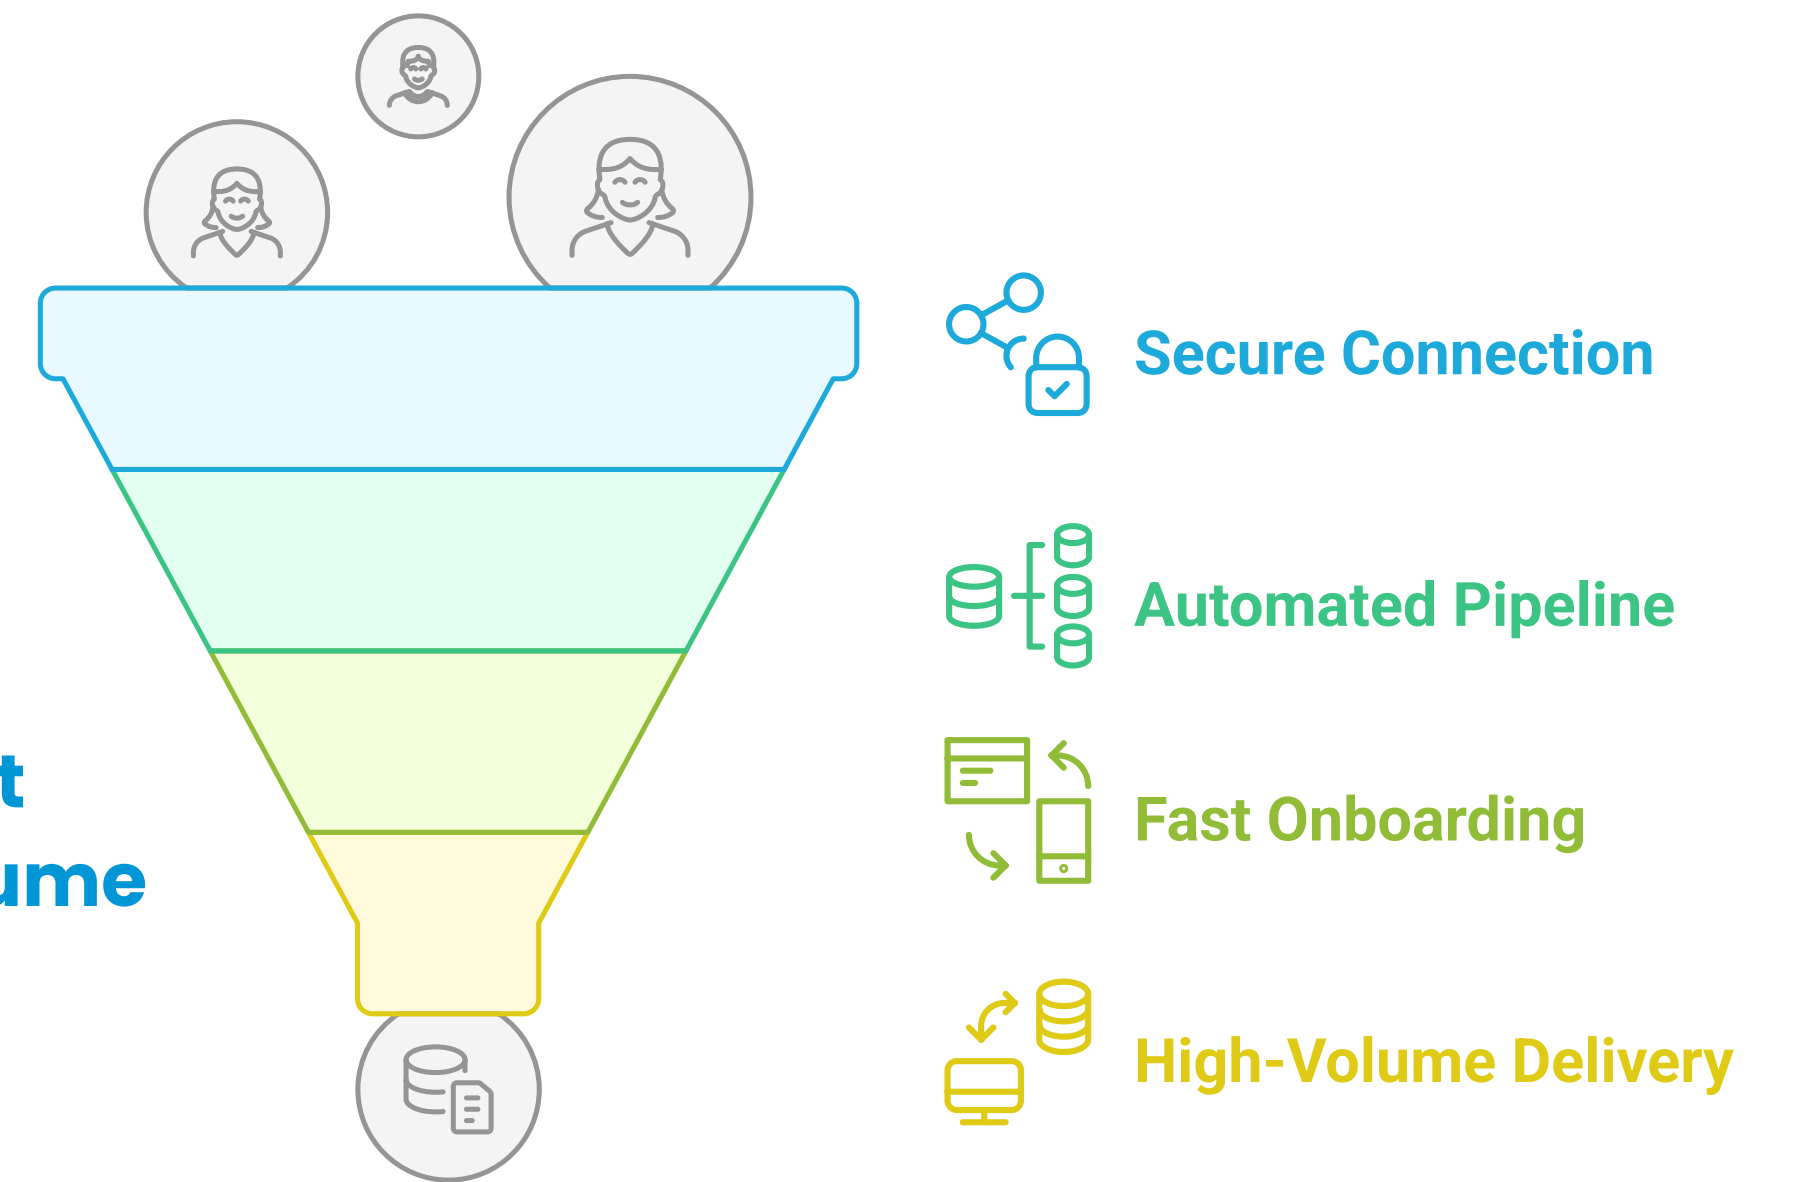

## Before KEYSYS

No integration existed between the client's platform and the AI fraud detection service. Financial institutions had **no way to send fraud-related data**—**stalling rollout and delaying time-to-value**.

## After KEYSYS

A **secure, automated pipeline** now connects financial institutions to the fraud detection service—enabling **fast onboarding** and **compliant high-volume data delivery**.
