

Transparent Medicaid Analytics Drive Higher Hospital Reimbursements

KEYSYS built a **secure, role-based portal** that gives hospital finance teams **real-time Medicaid reimbursement analytics** and **clear benchmarks**.

Client

AHCV is a **healthcare consulting network** helping **safety net providers** recover **Medicaid revenue** through **data-driven reimbursements**.

Business Problem

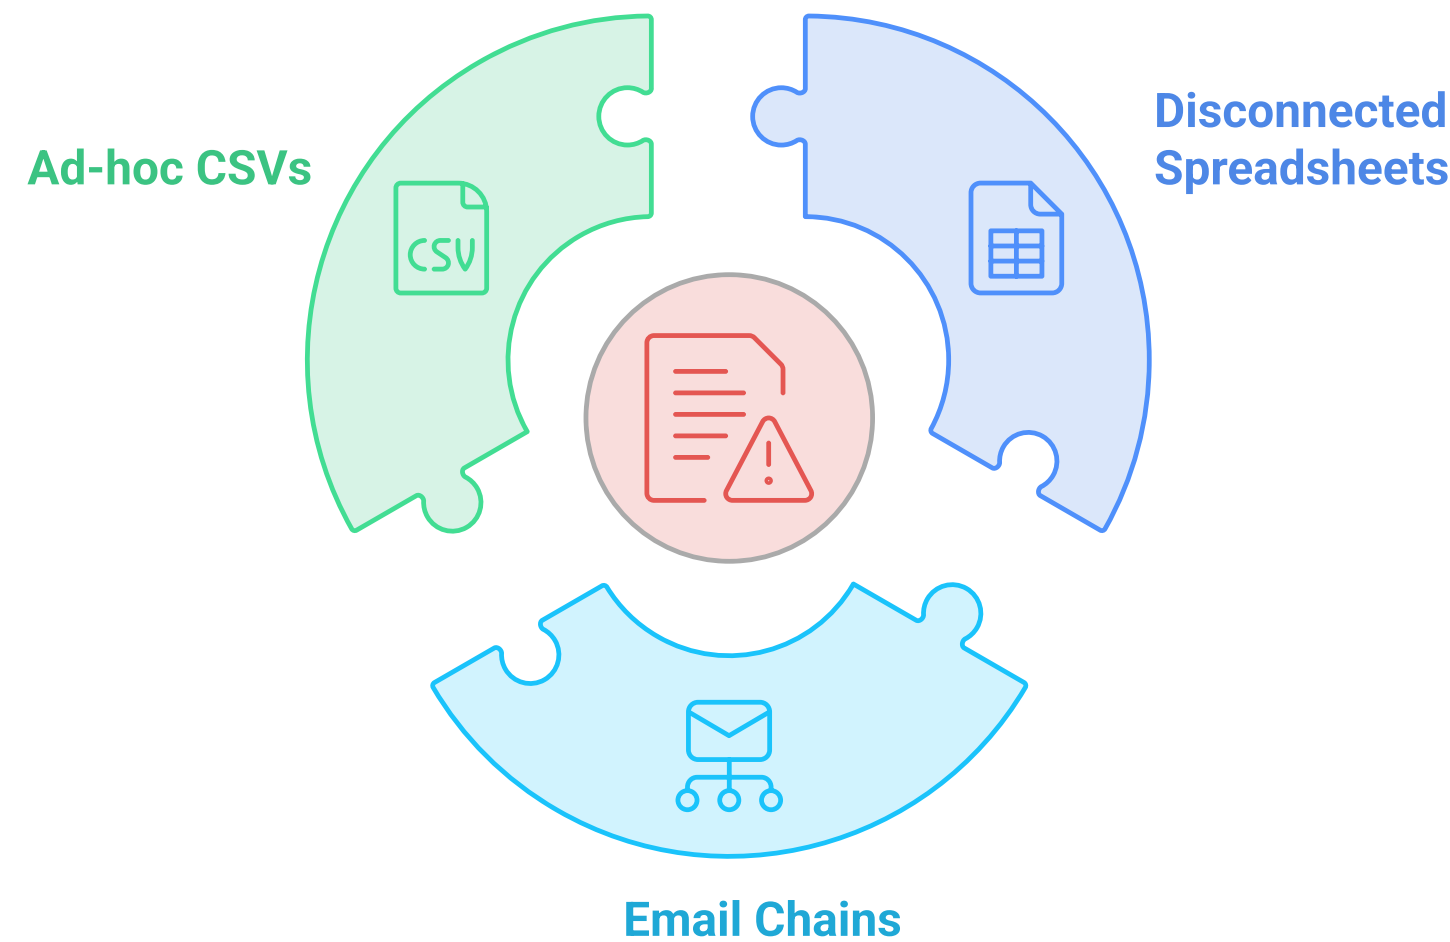

Hospitals juggled **disconnected spreadsheets**, **opaque files**, and shifting Medicaid rules to see reimbursements. CFOs burned time reconciling numbers, risking **millions**. Without a dedicated portal, AHCV depended on **emails** and **manual spreadsheets**, which slowed client onboarding.

KEYSYS Solution

KEYSYS engineered a **cloud-hosted analytics portal** that syncs **12 years of Medicaid payment data** into a **secure warehouse**, then surfaces insights via **interactive dashboards** and **benchmark charts**. And, granular **role-based logins** lock each hospital to its own data, while AHCV admins **upload new files with one click**.

Impact

The portal is a **decision support and transparency platform** that keeps hospitals **compliant**, **maximizes reimbursement**, and reveals **real-time market benchmarks**.

Before KEYSYS

Disconnected **spreadsheets**, **email chains**, and **ad-hoc CSVs** hid true Medicaid revenue and **burned hours of CFO time**.

After KEYSYS

A unified web app delivers **instant payment benchmarks**, **secure sharing**, and **one-click exports**, turning **data chaos into confident decisions**.
